

Cowbridge Physic Garden, Cowbridge, Vale of Glamorgan.

As part of the 750 year anniversary celebrations of Cowbridge's Borough Charter, the Cowbridge Physic Garden Trust was set up to instigate the construction of a Physic Garden within what was previously amongst other things a Kitchen garden for the grammar school. The site was walled on three sides, one of the walls formed part of the original town boundary wall dating back to 1266. Landcraft successfully tendered for the Phase I works to clear the site, construct the 'fourth' wall, create a path layout and install services to facilitate future phases. The scheme was designed by Anthony Jellard Associates.

An access into the area had to be made through one of the existing walls, which date back to 1266. A 3.5m opening was made by carefully taking down the wall by hand so as not to damage any of the existing stone.

The site was cleared of vegetation and rubbish that had accumulated. The remains of two existing greenhouse bases were demolished. The concrete foundation for the new wall was installed and the subbase for the footpath layout was formed.

The footpaths are edged with over 700m of granite sets. The paths have a cambered type 1 finish ready for surfacing in Phase II.

The 'new' wall is 30m long 600mm wide and 2.7m high. It has been constructed using local Blue Lias Limestone. A traditional sand/hydraulic lime mortar has been used to follow original construction methods as closely as possible.
